Labor Productivity Picks Up in Q3, But Trend Remains Modest

Labor productivity over the third quarter increased at a 1.9 percent annualized rate, which was nearly on pace with Q2. Over the past year, productivity was unchanged and remains a challenge to income growth.

Rising Output and Employment

- Nonfarm labor productivity rose at a 1.9 percent rate in the third quarter as output growth outpaced a 1.7 percent rise in hours worked. The gain was weaker than expected, however, and second quarter productivity was revised lower.
- Productivity growth remains weak in this recovery as final demand and investment have lagged behind prior recoveries. Over the past year, productivity growth has stagnated.

Compensation Still Struggling

- Rising productivity over the third quarter helped to lower unit labor costs. After ticking up in the second quarter, unit labor costs fell at a 0.6 percent annualized pace.
- Compensation growth continues to struggle, but gained some ground in the third quarter, rising at a 1.3 percent pace. Despite a weak inflation environment, real compensation is up only 0.3 percent from a year earlier.
